

Ultrasonic Cutting Solution - Ultrasonic Food Cutting

Problem

Our customer requested cake cutting machine to be possible cut very soft product. Saw cutters doesn't work.

Product

Fresh soft cake (main product) diameter: 200 and 240 mm. Height max. 60 mm. Mass can be airy (softer than whipped cream)

It will be great to have possibility cut additional product (option. Product is semi rigid, possible cut with saw or knives): plates 400 x 600 mm. Height max. 50 mm. But it is not obligatory, because product is cut well with simple mechanical knives.

Capacity

Capacity is low. Approx. 60 - 80 cakes per day.

Suggest

Because the output is not high, it is recommended to choose the ultrasonic cutting solution model -UFM5000 ultrasonic food cutting equipment or UFM6000 ultrasonic cake cutting equipment, can achieve a good cutting effect.
