

### **Handheld Ultrasonic Cutting Machine**

This is an entry-level ultrasonic slicer. It is good for products that are soft or sticky, that need a really clean edge cut, or for frozen products. It is manual cutting and very simple control. Typical application would be frozen sponge, pizza, gateaux or cheesecake. This machine would suit a small-medium size manufacturer with relatively low output, limited space and limited budget. It is a hand-held food tool.
