

Ultrasonic Cutting Tool - Cake Cutter Machine

UFM5000 ultrasonic cake cutting device

This is a flexible food cutting device. It is not only the use of ultrasonic cutting technology, but also with independent research and development of mechanical control system. The mechanical control system allows 6-axis movement - which means that the blades can move in several different directions.

The main application of the machine in the baking industry, but also can be used for nougat, marshmallow and other large viscosity of food.

Ultrasonic Cutting Tool is also used for cutting products such as sandwich jam. Customers choose the UFM5000 food cutting system to be flexible (able to cut a range of products on a machine), easy to maintain and clean. It also provides fast and accurate cutting.
